DETAILED ACTION

1. Claims 1-36 were originally pending in this case. Claims 9, 10, 16, and 15 have been cancelled by preliminary amendment. Therefore claims 1-8, 11-15, and 17-36 are pending.

Election/Restrictions

2. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-8, and 11-14, 35 and 36, drawn to a method, and a computer program product embodied in a memory medium causing a computing device to carry out the method, for embedding secret information into a color image signal, and extracting the secret information from the signal, where the secret information is embedded into a prescribed position in a first signal component and the position information of the secret information is embedded into a second signal component, classified in class 380, subclass 203.
- II. Claims 17-34, drawn to drawn to a method for embedding secret information in a color image signal showing the morphology (size or shape) of an object, where the secret information is embedded in a

prescribed position of the object specified by information showing the morphology of the object, classified in class 380, subclass 201.

3. The inventions are distinct, each from the other because:

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case there are different inventions because invention II discloses a different method for embedding the secret information from invention I. Invention I differs from invention II because it does not utilize the morphology of an object depicted by a color image to determine the position in which the secret information will be embedded. Invention II utilizes the morphological characteristics of a depicted object to determine this position and differs further from invention I because it does not embed position information as does invention I. There is a lack of a disclosure of the inventions being usable together.

4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper. The search for the two groups will be unrelated because the methods used for embedding the secret information is different and unrelated in each group. The type of information embedded differs between the two groups as well.
